

**Amendment to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (Currently Amended) A method of transmitting interactive television, whereby at least an interactive television application is transmitted inside application-modules in a broadcast stream that includes television content, wherein said method facilitates recording of said broadcast stream at a receiver, said method comprising the step of:

including storage related information for each of said modules in said broadcast stream; and

transmitting said broadcast stream including said modules and said storage related information, characterized in that said storage related information comprises:

categories indicating whether each said modules is alternatively (i) mandatory for recording, (ii) optional for recording or (iii) forbidden to be recorded at the receiver, wherein mandatory modules contain files that are critical for running a corresponding application from storage, and wherein optional modules contain files that offer a corresponding application extra features or contain configuration information that always must be downloaded from a live broadcast.

2. (Previously Presented) The method as claimed in claim 1, wherein said interactive television application is transmitted as at least one application object inside DSMCC-modules in said broadcast stream.

3. (Previously Presented) The method as claimed in claim 2, wherein said at least one application object comprises at least one application file object and at least one application directory object, said application file object comprising at least one application file and said at least one application directory object comprising storage directory information on respective application file.

4. (Previously Presented) The method as claimed in claim 1, wherein said storage related information further comprises:

module identification information.

5. (Previously Presented) The method as claimed in claim 4, wherein the step of including storage related information comprises:

including said storage related information in an Application Information Table (AIT) and/or in a Download Information Indication message.

6. (Previously Presented) The method as claimed in claim 4, wherein said module identification information is defined and included in an Application Information Table (AIT) and consists of two fields, the first field being an organisation\_id and the second field being an application\_id, whereby said id values are used to identify identical applications.

7. (Canceled)

8. (Previously Presented) The method as claimed in claim 1, wherein a Digital Storage Media Command and Control generator generates groups of modules with similar storage related information in an object carousel for broadcasting.

9. (Previously Presented) The method as claimed in claim 1, wherein said storage related information comprises properties of a module chosen from

- a) Code and/or Data and/or
- b) Fixed or Variable.

10. (Currently Amended) A method of receiving an interactive television broadcast stream for recording, whereby at least an interactive television application is comprised in the broadcast stream inside application-modules, said method comprising the steps of:

extracting storage related information for each of said modules from said broadcast stream; and

recording modules which are mandatory for recording, based on said storage related information, characterized in that said storage related information comprises categories indicating whether said modules are alternatively (i) mandatory for recording, (ii) optional for recording or (iii) forbidden to be recorded, wherein mandatory modules contain files that are critical for running a corresponding application from storage, and wherein optional modules contain files that offer a corresponding application extra features or contain configuration information that always must be downloaded from a live broadcast.

11. (Previously Presented) The method as claimed in claim 10, wherein said method further comprises the step of:

recording modules which are optional for recording, based on said storage related information.

12. (Previously Presented) The method as claimed in claim 10, wherein said method further comprises the steps of:

identifying identical modules, and storing only one copy of identical modules on a specific storage medium.

13. (Previously Presented) The method as claimed in claim 10, whereby said interactive television is MHP, OpenTV or DASE.

14. (Currently Amended) An apparatus for recording and/or playing back interactive television, said apparatus being adapted to record and/or playback an interactive television broadcast stream to and from a storage medium, said apparatus being adapted to receive said interactive television broadcast stream, said broadcast stream including television content, an interactive television application contained in modules, and storage related information for each of said modules, said apparatus comprising:

means for extracting said storage related information of said modules from said broadcast stream; and

means for recording said modules in dependence on said storage related information, characterized in that said storage related information comprises categories indicating whether said modules are alternatively (i) mandatory for recording, (ii) optional for recording or (iii) forbidden to be recorded, wherein mandatory modules contain files that are critical for running a corresponding application from storage, and wherein optional modules contain files that offer a corresponding application extras features or contain configuration information that always must be downloaded from a live broadcast, and said means for recording being adapted to record only modules for which said storage related information allows recording.

15. (Previously Presented) The apparatus as claimed in claim 14, wherein said storage related information comprises module identification information for modules, and wherein said apparatus further comprises:

means for preventing recording of more than one application module with identical module identification information on a storage medium in said apparatus.

16. (Currently Amended) A computer-readable medium having embodied thereon a computer program for processing by a computer, said computer program causing said computer to prepare and transmit an interactive television broadcast stream facilitating recording by a receiver, the computer program comprising:

a code segment for causing the computer to include application modules and storage related information for each of the application modules in an interactive television broadcast stream, at least an interactive television application being included inside said application modules, and

a code segment for causing the computer to transmit the interactive television broadcast stream, characterized in that said storage related information comprises categories indicating whether said modules are alternatively (i) mandatory for recording, (ii) optional for recording or (iii) forbidden to be recorded, wherein mandatory modules contain files that are critical for running a corresponding application from storage, and wherein optional modules contain files that offer a corresponding application extra features or contain configuration information that always must be downloaded from a live broadcast.

17-20. (Canceled)
